

# Dear business partners, dear friends, ladies and gentlemen

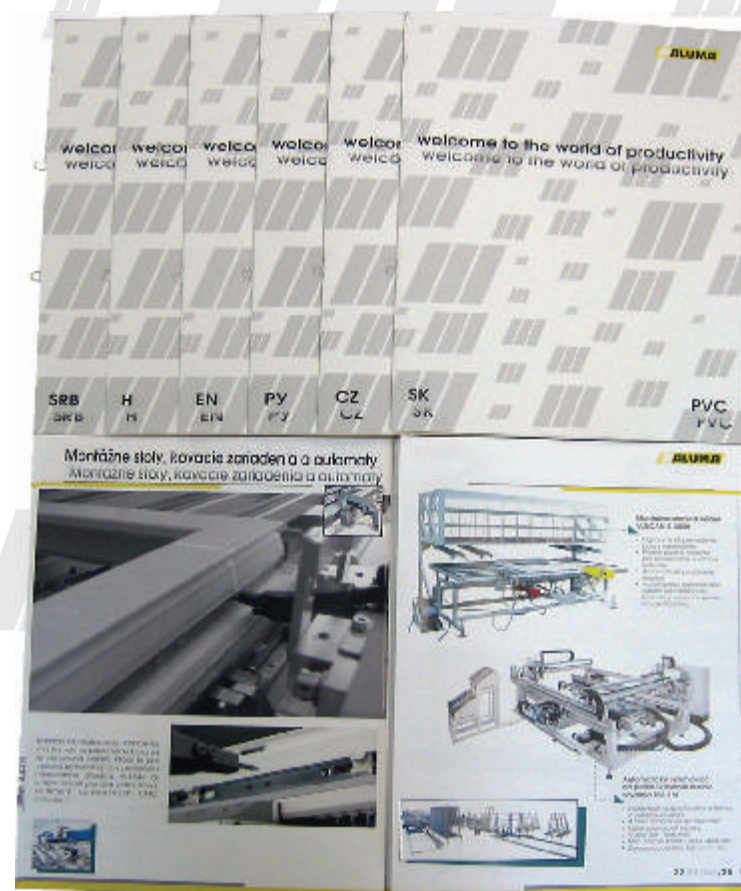

Nuremberg in Germany is in the spring every 2 years in focus of the window producers and with it connected branch. Demand is confronted with offer at the international building trade fair Fensterbau/frontale. In the year 2010, 760 exhibitors from 30 countries worldwide presented their products on the exhibition area 100.000 m<sup>2</sup>.

ALUMA ČS welcomed to its stand more than 200 visitors from 37 countries. We noticed the interest not only from the traditional Europe markets but also from Asia, Africa and America.

The visitors could view the well-established products from the product range of ALUMA ČS, as well as some novelties.

## New catalogue for you

Except the novelties, ALUMA ČS presented a new product catalogue of devices for production of PVC windows and doors at fensterbau 2010.

The catalogue is available on request in 6 languages - Slovakian, Czech, Russian, English, Hungarian and Serbian:

# Report

**ALUMA**

For sympathizers, business partners and employees of the company

april 2010

fensterbau  
frontale 2010

## What it brought ...

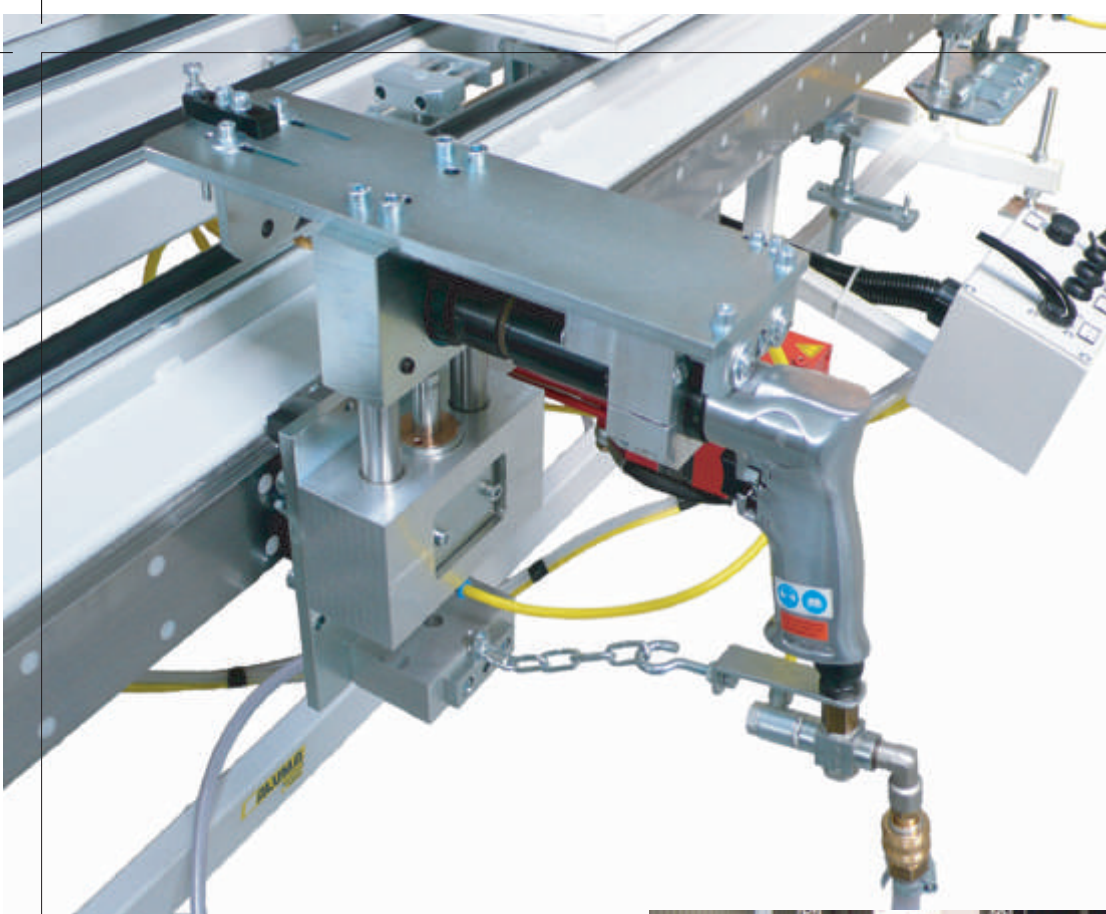

760  
exhibitors

from 30  
countries worldwide

more than  
100.000 visitors

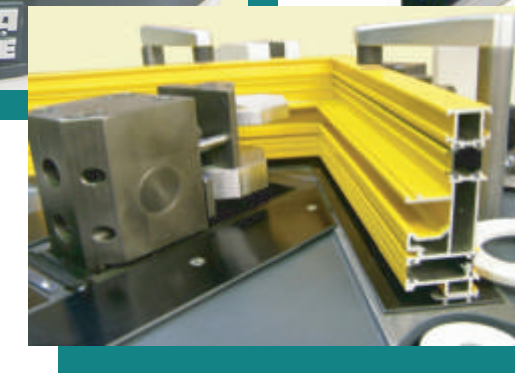

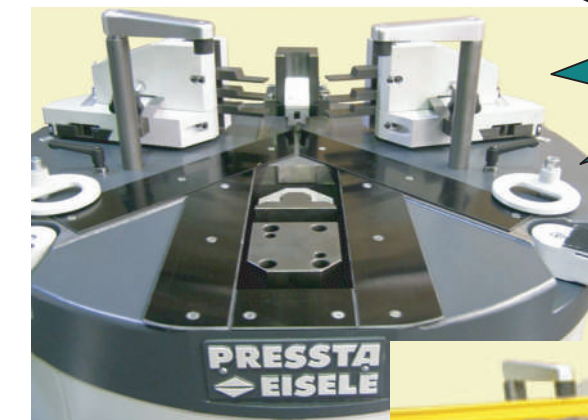

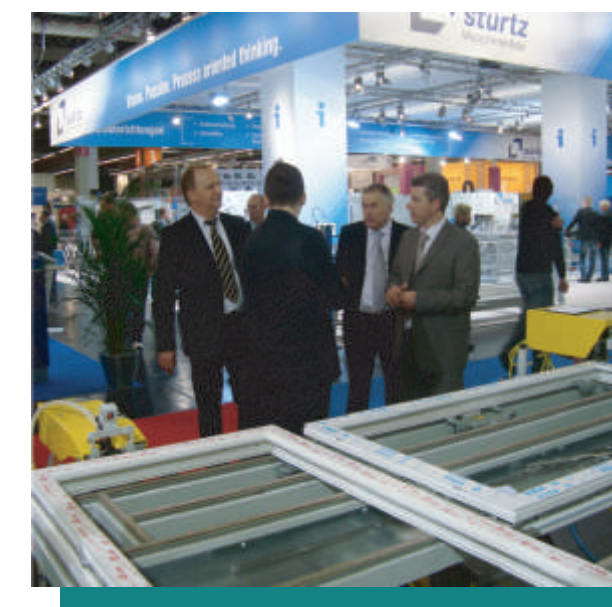

Two head reinforcement  
screwing device

## CYKLON D

This novelty in the product range of ALUMA ČS s.r.o. intrigued the professional public. It is a suitable device for the innovation of the production line in term of ratio between price and capacity.

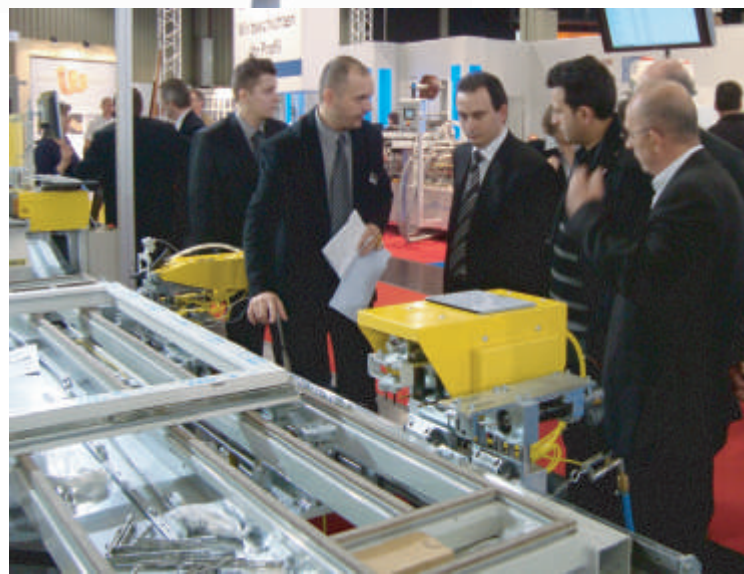

Pressta-Eisele introduced a new corner crimping machine Pressta 7000 at its stand in the hall 4A. The new model has higher power and quite new design. We will sell the machine from July, 2010. Pressta-Eisele is going to produce another type of the machine with the same design - the model Pressta 5000.

Sash hardware  
assembly table

## VULCAN S

Proven in practice the sash hardware assembly table Vulcan S was in a great interest during the whole fair.

Also this year, the visitors to the fair convinced of our competence in automation technology for manufacture of PVC windows.

For the first time it was introduced a new line EVO LINE with a CNC corner cleaning machine with two controlled axis 2MC, with a motor-driven operating system and with an innovative turning station to achieve an optimal cycle. In addition, it was integrated into this line a device for filling of insulating material. The insulating material is filled into the profile in neutral time.
