VULCAN Y 3000

Door hardware assembly table

Door hardware assembly table - VULCAN Y 3000

Use

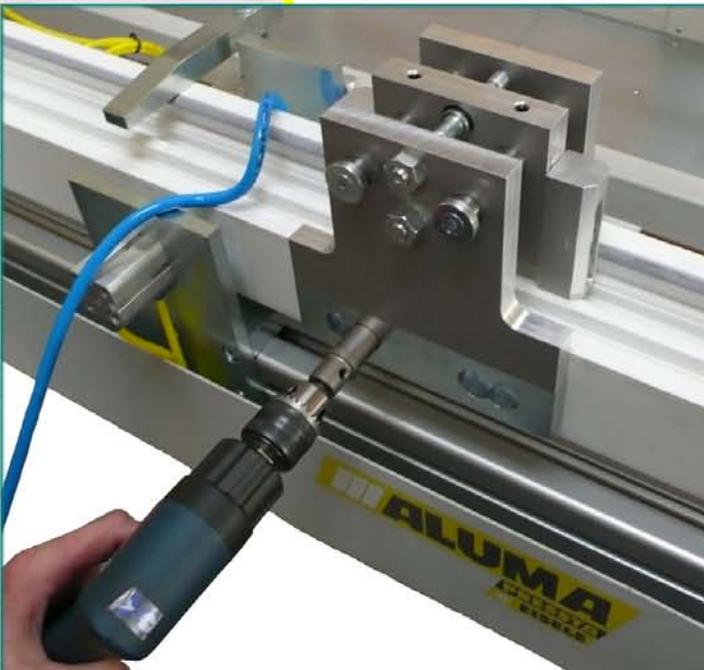

- To make the production of entry doors more effective. Complete milling of grooves for hardware assembly and door hinge drilling
- Pivoting, pneumatic controlled clamping mechanism with four heads enables the operator to choose the optimum position for profile machining from three sides in one clamping
- Simultaneous clamping of frame and sash profiles at machining – basic precondition for accurate and quick parts assembly
- In the machine integrated unique mechanical centring system made by ALUMA enables to choose even and odd number of hinges, while for both cases there are available symmetric and asymmetric layout
- In the machine are integrated – 4x quick coupling for air tools, 3x socket for power tool
